

RADIAL ACCESS

FASTFACTS 2023

Radial Access is the recommended approach for PCI

Bleeding rates were **lower** among patients who received revascularisation via the **radial artery - 0.3% versus femoral artery 1.8%**

Radial Access was used in **81.3%** of patients undergoing primary PCI for STEMI

The **NCR** data shows the national rate of radial access has been increasing gradually since 2019

The rate of **radial artery use was 78.5%** with rates across hospitals ranging from 50.2% to 95.2%

The radial access rate was **higher in the public sector (79.7%)** compared to the private sector (75.5%)

Radial access was more frequently used in **males (80.2%)** compared to **females (73.2%)**
